Journal Titles

Make your research **better**, **faster**, and **easier** by using these techniques when searching the Library.

**Remember that research is a process.**  
Don't be afraid to experiment with different combinations of keywords and techniques to see how your results change!

## Keyword Searching

Search only for the **most important words or phrases** in your topic. Library databases work differently than Google.

Take your research question and pull out the most important words:

“How does **screen time** affect **children**?”

## Library OneSearch

AND

▼

## Synonyms

Include synonyms and other related words in your search.

Library OneSearch: Search articles, books

AND

▼

AND

▼

Using synonyms or related words will increase your search results.

## Boolean Searching: Using AND, OR, or NOT

AND

▼

Use **AND** to find fewer results

We can look at this using a Venn Diagram:

screen time **AND** children

OR

▼

AND

▼

Use **OR** to find more results

screen time **OR** video games

AND

▼

NOT

▼

Use **NOT** to exclude results

children **NOT** teenagers

\*use **NOT** sparingly to remove irrelevant results

## Exact Phrasing

“ Use double quote marks (") around multiple words to find results with those **exact words** right next to each other, in that **exact order**. ”

AND

▼

AND

▼

## Truncation

Use an asterisk (\*) at the end of a root word to search for words with the same or similar meaning. This will give you results with **multiple endings** and **spellings**.

Search for the root: **behav\***

behave  
behavior  
behaviour  
behavioral

AND

▼

AND

▼

## Field Searching

Search for keywords in a specific field or category by changing the drop-down menu to the right of the search boxes.
